AI CRYPTO

AI BlockChain for Decentralized Economy

Monthly Report. Nov. 2018

Development

Development Situations

AI Deep Learning

1) Task

A key development task for AI Deep Learning is to establish and implement a distributed deep learning computation methodology optimized for the hardware and network environments of mining pools and implement them in a user-friendly tool.

2) Situation

After developing a minimal available product (MVP) with core technology in September, we are developing and testing service prototypes, including CLI and Web UI, and working with leading companies on a proof of concept (POC) schedule. In addition to distributed deep-learning training, a new solution is being developed to leverage mining server resources to distribute deep-learning services.

AI Mining

1) Task

A key task for AI Mining is to remotely control hundreds to thousands of mining servers to create a system that dynamically distributes them to distributed deep running and crypto mining without losing resources, thereby maximizing the profitability of mining pools

2) Situation

After developing a minimal viable product (MVP) that includes core technologies in September, we are developing and testing container distribution management and load balancing solutions for cloud systems in mining pools with the goal of developing more advanced service prototypes. We are also developing a distributed application (dapp) based on ERC721 to link this to AIC.
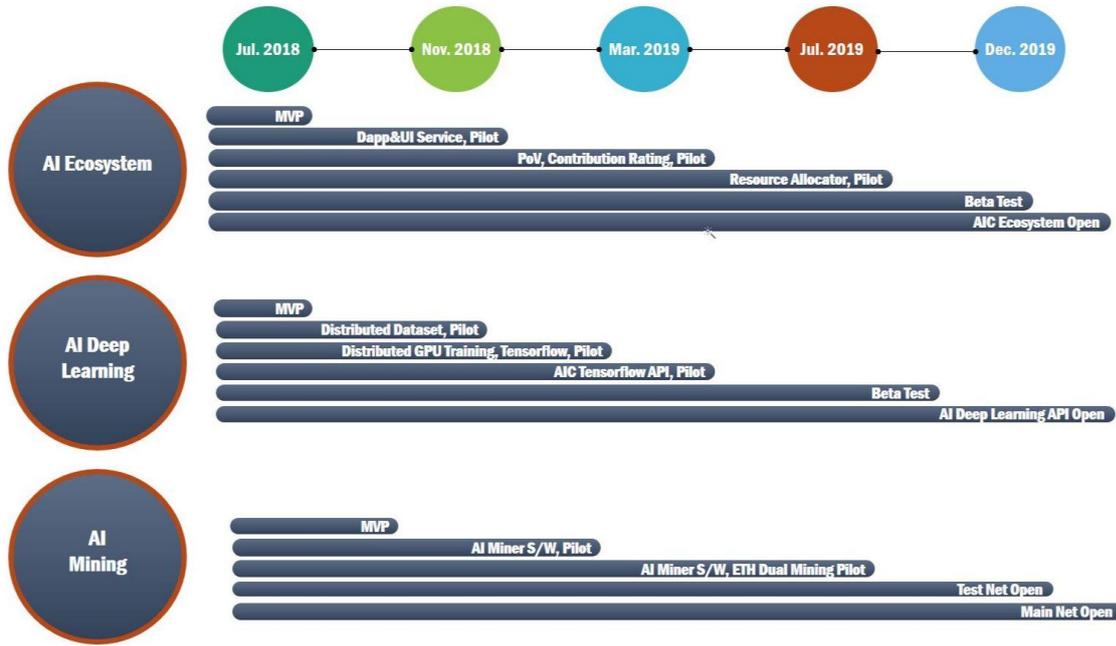

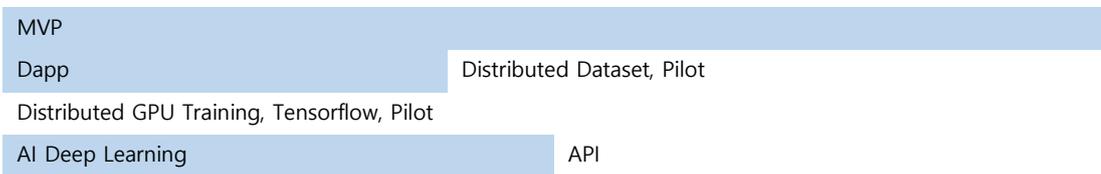

Development Achievement by Roadmap

Figure 1. RoadMap

AI Deep Learning

MVP	
Dapp	Distributed Dataset, Pilot
Distributed GPU Training, Tensorflow, Pilot	
AI Deep Learning	API

AI Mining

MVP	
AI Miner S/w, Pilot	
Test Net	

AI Ecosystem

MVP
Dapp API, Pilot
PoV, Rating, Resource Allocator, Pilot
Beta Test, AIC Ecosystem open

Finished/Ongoing	Planned

Management

Management Situation

Exchange

1) IDAX Listing & Event

   After being listed in IDAX on November 9, we conducted an event to pay a total of 5 million AICs to the top buyers who purchased AIC between November 11 to 25 (SGT 23:59). After the end of the event participation period, IDAX is checking for eligibility of the rankers' account. (Differential payment to the top five traders)

2) BItforex video recording for promotion event

   At AI Crypto, three employees who use different languages filmed AIC promotion video for BitForex. (Korean, English, Kazakhstan)

3) NEXYBIT Listing Review

   After completing the POC on AI Dapp and tracing AIC trade trends on BitForex and IDAX, we will decide to the listing date.

4) Discussion of listing with the Korean crypto exchange

   There are some places that are in a positive discussion, but we will look at the trading status of the exchanges and then decide whether to list or not.
